	Urgent	Not Urgent
Important	**Do - (Your MVP)** ● Make a workout log on frontend ● Make a sql db system to store the workout data ● Train a regression model to predict next-session progress ● Load my strong dataset to train the ML model	**Schedule - (For V2.0+)** ● Find a large dataset for workouts ● Train a neural network to predict future progress ● Add the ability to import data from other workout sites
Not Important	**Delegate - (Use a library)** ● Regression Model, use scikit-learn ● Database Storage, use postgreSQL to store and retrieve the workout records ● Graph workout history/predicted performance, use Matplotlib	**Delete - (Cut it)** ● Workout leaderboards ● Prediction based off additional factors like protein intake ● Smartwatch/fitness device integration
